

Functional Test - Module 8: Look Up Reservation

Project: Blue Team — Moffat Bay Marina

Course: CSD 460 - Capstone Project

Description: Test plan for the Look Up Reservation page (Sara — Front End, Carolina — Back End).

Date: 2026/09/13

Front End Developer: Sara White

Back End Developer: Carolina Rodriguez

Front End Developer Tester: Sara White

Back End Developer Tester: Carolina Rodriguez

Front End Peer Tester: Miguel Fernandez

Back End Peer Tester: Robert Breutzmann

To complete the test case plan, fill out the information for Project, Course, Description and Date in the header above.

Table of Contents

- [Cover Page](#)
- [Test 1: Signed-In Customer Can Retrieve Own Reservation](#)
- [Test 2: Customer Cannot Retrieve Another Customer's Reservation](#)

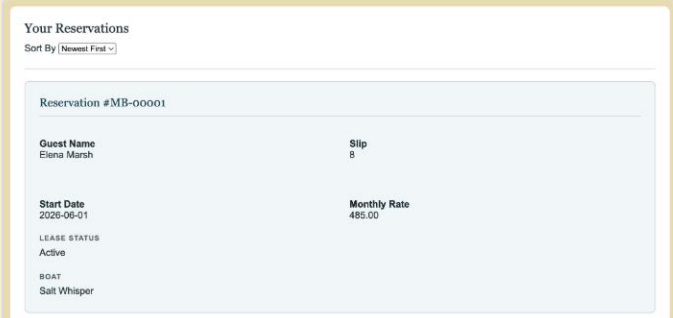

For each test, the developer should: provide a test description, a test objective, the developer name and date tested. For each step, fill out the actions to be taken and describe the expected results, and enter **Pass** or **Fail**. The peer tester should provide their name, date tested, enter **Pass** or **Fail** for each step, and add each step's screenshot(s) in the same cell as their Pass or Fail.

Test 1: Signed-In Customer Can Retrieve Own Reservation

Test Objective: Verify that the Look Up Reservation backend returns a reservation that belongs to the signed-in customer.

DEVELOPER: Carolina Rodriguez | **TESTED ON:** Sept 18, 2026

PEER TESTER: Robert Breutzmann | **TESTED ON:** Sept 18, 2026

Step	Action	Expected Results	Dev Test	Peer Test
1	Sign in using <code>elena.marsh@example.com</code> and password <code>MoffatMarsh01!</code> .	Login succeeds and the Look Up Reservation link is available.	Pass	Pass <i>The header after Step 1's login, showing the Look Up Reservation link.</i> 
2	Open Look Up Reservation and search for reservation number <code>MB-00001</code> , year <code>2026</code> , and month <code>June</code> .	The request is sent to <code>/reservations</code> and the reservation is returned for the signed-in customer.	Pass	Pass <i>The address bar after Step 2, showing the search sent to /reservations with the reservation number, year, and month.</i> 
3	Review the returned reservation details.	Elena's reservation is displayed with the confirmation number, guest name, slip number, start date, monthly rate, lease status, and boat name.	Pass	Pass <i>Elena's reservation card from Step 3, with every listed detail visible.</i> 

Comments

Developer (Carolina)
The reservation lookup worked as expected and returned Elena's reservation when I searched for MB-00001 while signed in as her. The correct reservation details were displayed, including the guest name, slip, start date, monthly rate, lease status, and boat name. I did not run into any backend issues during this test, but front-end does need cosmetic touches for buttons.

Peer Tester (Robert)
This worked as expected. The note I would have on this, as it was not immediately obvious that you could leave the Reservation number blank to retrieve all reservations, is that it might be better to rethink how this page works entirely. Instead of being a "Look up" it should be more of a "My Reservations" page, where once you navigate to it, all of your reservations: past, present, and future: show up and you can filter by Year/Month/Number/Status/etc.
At the very least, there should be a "temporary text" or helper text in the Reservation Number box that says that "Leave Blank to call up all reservations. Because most people don't keep their reservation number on hand.

Test 2: Customer Cannot Retrieve Another Customer's Reservation

Test Objective: Verify that the Look Up Reservation backend only returns reservations that belong to the signed-in customer.

DEVELOPER: Carolina Rodriguez | **TESTED ON:** Sept 18, 2026

PEER TESTER: Robert Breutzmann | **TESTED ON:** Sept 18, 2026

Step	Action	Expected Results	Dev Test	Peer Test
1	Sign in using <code>elena.marsh@example.com</code> and password <code>MoffatMarsh01!</code> .	Login succeeds and Elena's customer session is active.	Pass	Pass The header after Step 1's login, reading "Welcome, Elena M." Logged in successfully x Look Up Reservation Welcome, Elena M. Log Out
2	Open Look Up Reservation and search for reservation number <code>MB-00004</code> . Leave Year as All Years and Month as All Months.	The backend searches using Elena's session customer ID along with the reservation number.	Pass	Pass The lookup form filled in with MB-00004, All Years, and All Months before submitting in Step 2. Find Your Reservation Reservation Number MB-00004 Year All Years Month All Months Look Up Reservation
3	Review the result.	The reservation is not displayed and the page shows <code>No reservation found.</code>	Pass	Pass The "No reservation found." message from Step 3, with no reservation card shown. No reservation found.

Comments

Developer (Carolina)

The lookup correctly did not return a reservation that did not belong to the signed-in customer. Instead, the page showed "No reservation found." The backend is using the customer ID from the session to limit reservation results. I did have to adjust the error message because at first the page was not displaying any response when no reservation was found. After that fix, no additional backend issues came up.

Peer Tester (Robert)

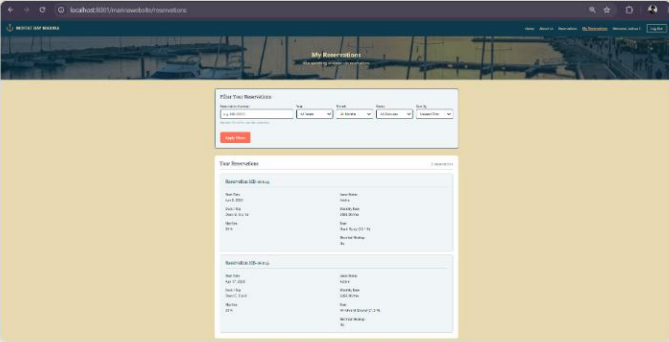

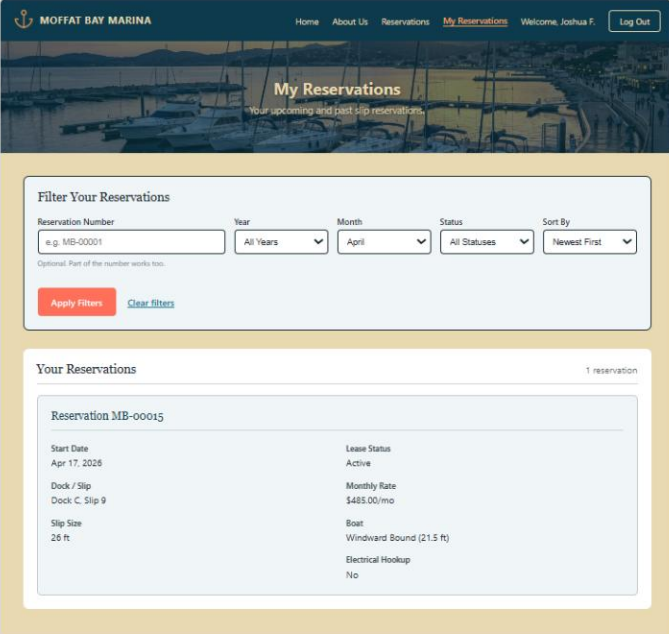

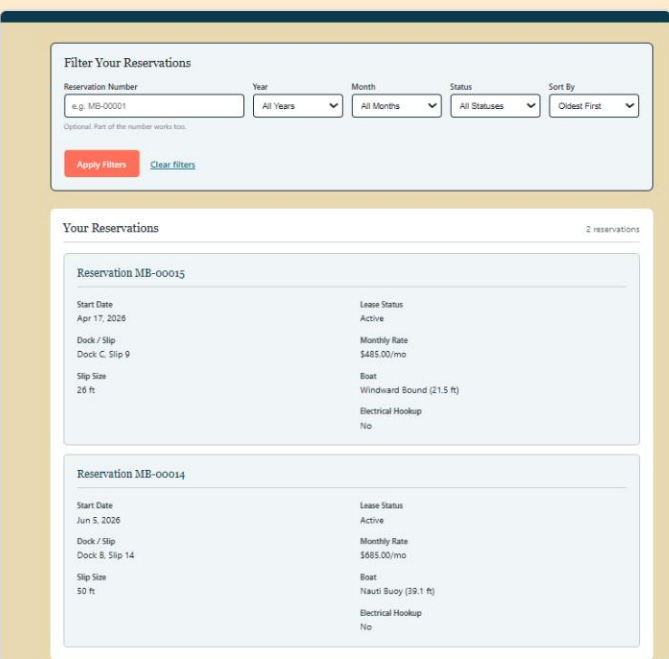

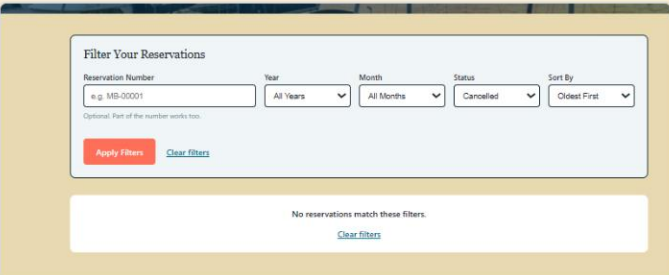

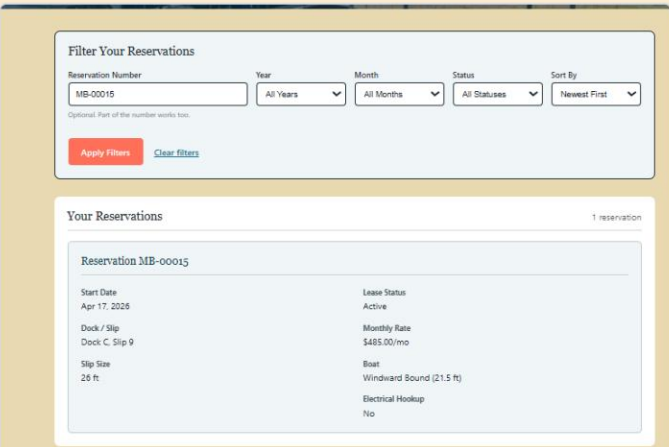

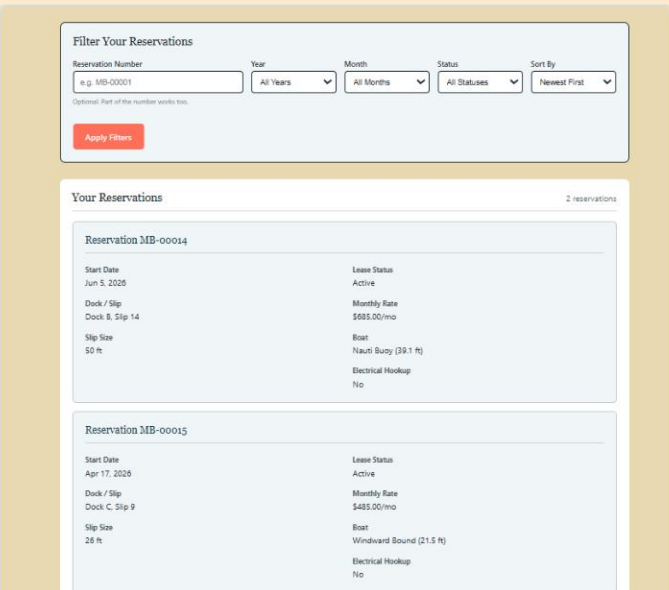

See my note above on filtering. Dropdowns for reservation numbers could be filled in live by the database so there is no chance at all that a customer could fill in someone elses reservation number.

Test 3: My Reservations — Customer Can Filter Reservation Results

Test Objective: Verify that the My Reservation Page (Look Up Reservation) correctly filters and sorts reservations.

DEVELOPER: Sara White | TESTED ON: Sept 19, 2026

PEER TESTER: Miguel Fernandez | TESTED ON: Sept 20, 2026

Step	Action	Expected Results	Dev Test	Peer Test
1	Navigate to <code>http://localhost:XXXX/marin</code> <code>website/</code> and click the login button on the right side of the header.	A popup window with user login fields should appear after clicking the login button.	Pass	Pass The home page header immediately after signing in, showing the login confirmation message. The login popup closes on submit, so it is not visible in this shot. 
2	Login with the following credentials: Username: <code>joshua.foster@example.com</code> Password: <code>Foster10!</code>	After logging in, the header should say "Welcome, Joshua F." next to the Log Out button on the right side of the header.	Pass	Pass The header after signing in as Joshua, reading Welcome, Joshua F. beside the Log Out button. 
3	In the navigation header, click the My Reservations link.	The My Reservations page loads. The Filter Your Reservations card displays the Reservation Number field; Year, Month, Status, and Sort By dropdowns; and the Apply Filters button. Two reservation cards are displayed under Your Reservations.	Pass	Pass The My Reservations page on load, with the full filter card and both reservation cards under Your Reservations. 
4	In the filter card, use the dropdown menu for Month and select April. Click the Apply Filters button.	The only reservation card should be for reservation <code>MB-00015</code> with a start date of Apr 17, 2026.	Pass	Pass The results with Month set to April, showing MB-00015 on its own with a start date of Apr 17, 2026. 
5	In the filter card, change the month dropdown menu back to All Months. Then select Oldest First under the Sort By dropdown menu. Click the Apply Filters button.	Both reservation cards should display and reservation # <code>MB-00015</code> should be ordered first.	Pass	Pass Month back to All Months with Sort By set to Oldest First, both cards returned and MB-00015 ordered first. 
6	Under the Status dropdown on the filter card, select Cancelled and click Apply Filters.	No reservations should appear and a message that reads "No reservations match these filters." should display. Below the message a Clear Filters hyperlink should appear.	Pass	Pass Status set to Cancelled, showing the no-results message with the Clear Filters link below it. 
7	Using the Reservation Number field, type in <code>MB-00015</code> and click Apply Filters.	Only reservation # <code>MB-00015</code> should appear in the results.	Pass	Pass MB-00015 typed into the Reservation Number field, returning that reservation only. 
8	To the right of the Apply Filters button, verify the Clear Filters hyperlink is visible and then click it.	All filter options should reset to their default settings and the Clear Filters hyperlink should disappear. All reservations should appear under Your Reservations again.	Pass	Pass After clicking Clear Filters, every field back to its default, the link gone, and both reservations returned. 

Comments

Developer (Sara)
Everything worked as expected. Each option on the filter card properly filtered out reservations. The sort functions worked as well and typing in a reservation number showed that specific reservation only. Everything was easy to read and understand.

Peer Tester (Miguel)
Ran all eight steps against Joshua’s account and the filtering held up. Month, Status, and Reservation Number each narrowed the list to the right records, and Oldest First flipped the order the way it should. The empty state is the part I liked most — it tells you nothing matched instead of leaving a blank panel, and the Clear Filters link sits right in the message so you are not stuck there.
One small thing, not a blocker. When the filters return nothing, the Your Reservations header and the reservation count disappear along with the results, so for a second it reads like the section fell off the page rather than filtered to zero. Keeping the header with a “0 reservations” count would make that clearer.
