

Functional Test - Module 5: Landing Page

Project: Blue Team — Moffat Bay Marina

Course: CSD 460 - Capstone Project

Description: Test plan for the landing page (index), covering the sticky site header and responsive layout.

Date: 2026/09/05

Front End Developer: Carolina Rodriguez (Landing Page), Sara White (Shared Header/Footer)

Back End Developer: Carolina Rodriguez

Developer Tester: Sara White

Peer Tester: Miguel Fernandez

To complete the test case plan, fill out the information for Project, Course, Description and Date in the header above.

About this document

These tests were originally written and performed by Sara White (developer) and Miguel Fernandez (peer tester) for the Module 5 test plan (Module-5/BlueTeam_Mod5_TestPlan.docx , Tests 1, 2). They were re-formatted into this layout by Claude. The steps, results, dates, comments, and screenshots are carried over from the original unchanged; the original recorded each result as Yes or No, shown here as Pass or Fail. The tests were not re-run.

Table of Contents

- [Cover Page](#)
- [Test 1: Landing Page](#)
- [Test 2: Landing Page](#)

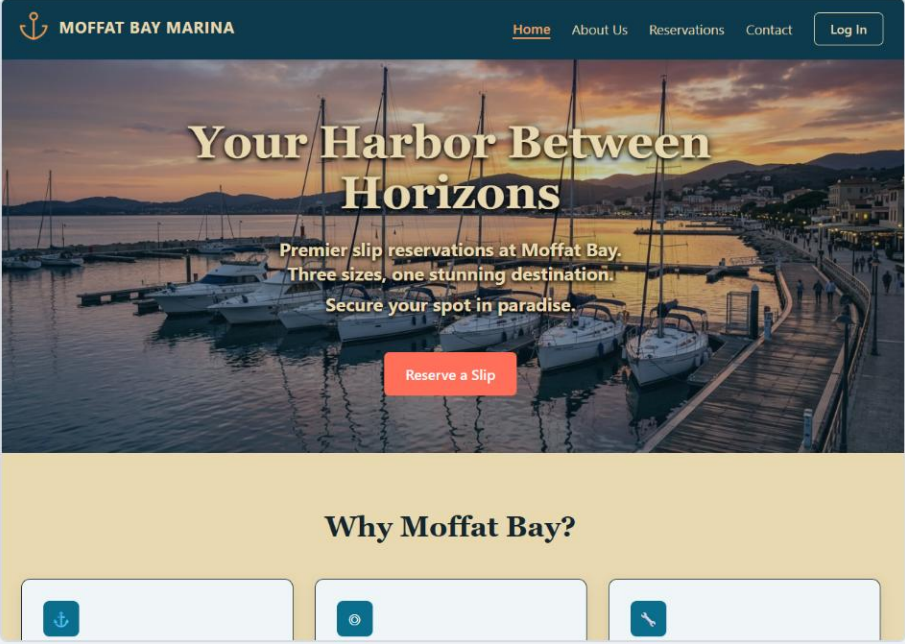

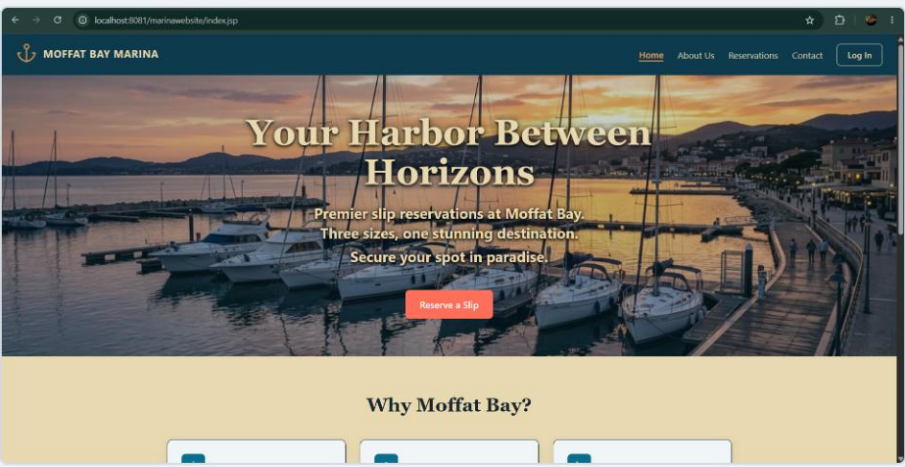

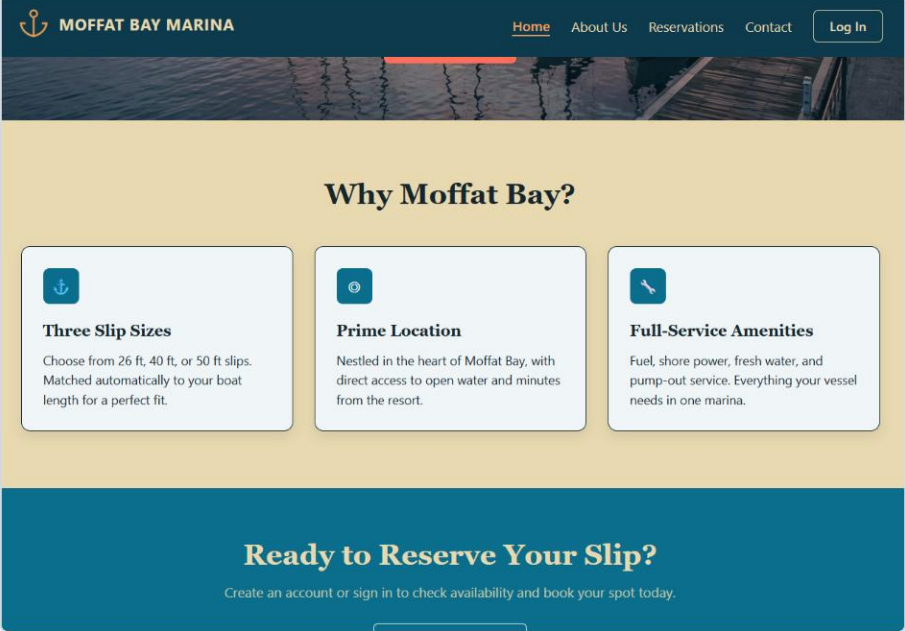

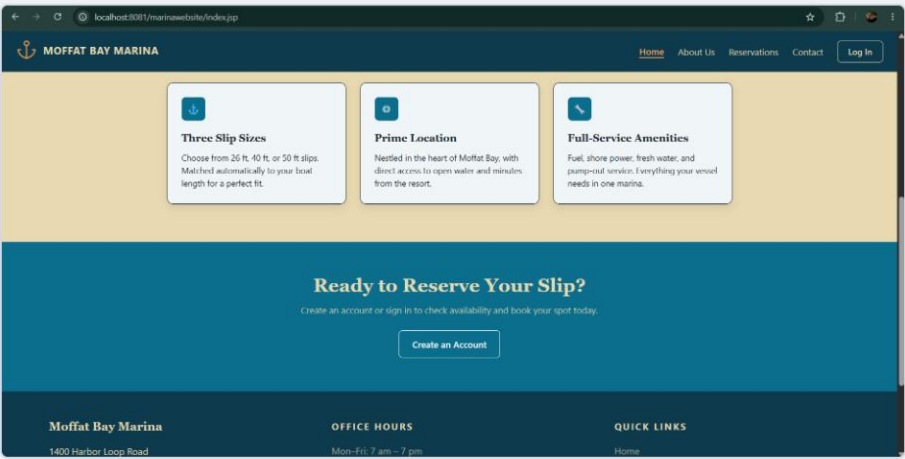

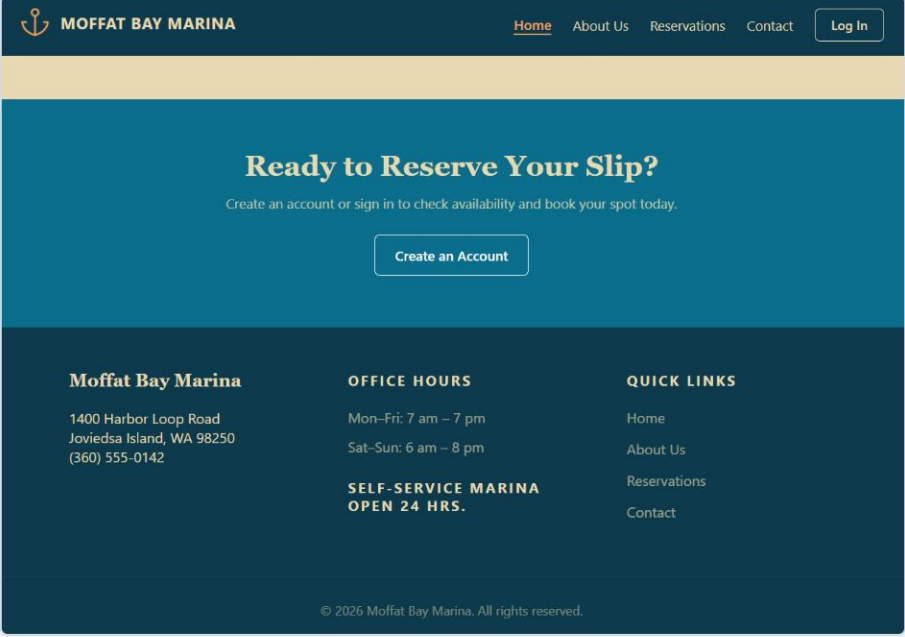

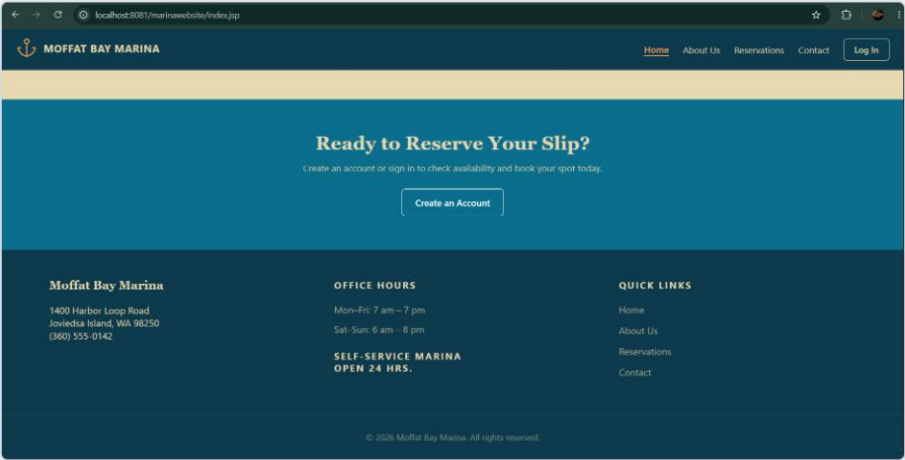

For each test, the developer should: provide a test description, a test objective, the developer name and date tested. For each step, fill out the actions to be taken and describe the expected results, and check Pass or Fail. The peer tester should provide their name, date tested, check Pass or Fail for each step, and fill out the Screenshots list below the table with the matching screenshot number for each item.

Test 1: Landing Page

Test Objective: Verifies site header is visible at all times (sticky header)

DEVELOPER: Sara White | TESTED ON: Sept 5, 2026

PEER TESTER: Miguel Fernandez | TESTED ON: Sept 6, 2026

Step	Action	Expected Results	Dev Test	Peer Test
1	In a browser, navigate to http://localhost:8080/marinawebsite/index.jsp Or http://localhost:8081/marinawebsite/index.jsp	The Moffat Bay Marina landing page should load.	Pass	Pass
Developer (Sara)  Peer tester (Miguel) - Test 1, Step 1 - The landing page loaded at index.jsp, header visible at the top. 				
Step	Action	Expected Results	Dev Test	Peer Test
2	Scroll halfway down the page.	The header should remain at the top of the page as you scroll.	Pass	Pass
Developer (Sara)  Peer tester (Miguel) - Test 1, Step 2 - Scrolled halfway down. The header is still pinned to the top of the window. 				
Step	Action	Expected Results	Dev Test	Peer Test
3	Scroll to the bottom of the page.	The header should remain at the top of the page as you scroll.	Pass	Pass
Developer (Sara)  Peer tester (Miguel) - Test 1, Step 3 - Scrolled to the bottom of the page. The header has not moved. 				
Step	Action	Expected Results	Dev Test	Peer Test
4	Scroll back to the top of the page.	The header should remain at the top of the page as you scroll.	Pass	Pass
Developer (Sara)  Peer tester (Miguel) - Test 1, Step 4 - Scrolled back to the top. The header and navigation are unchanged throughout. 				

Comments

- Developer (Sara)

no issues here. The header was sticky, it stayed in place and none of the navigation elements became distorted as I scrolled up and down the page.
- Peer Tester (Miguel)

Confirmed. The header stayed fixed at the top through all four scroll positions, and none of the navigation elements shifted or overlapped on the way down or back up. Tested on port 8081 rather than 8080, since XAMPP holds 8080 on my machine – same build either way.

Test 2: Landing Page

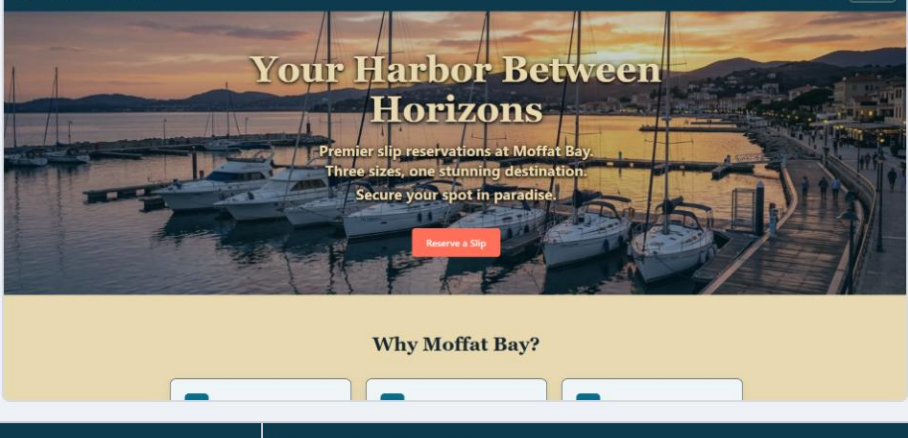

Test Objective: Verifies landing page content is responsive and stacks when browser minimized past <a certain point>

DEVELOPER: Sara White | TESTED ON: Sept 5, 2026

PEER TESTER: Miguel Fernandez | TESTED ON: Sept 6, 2026

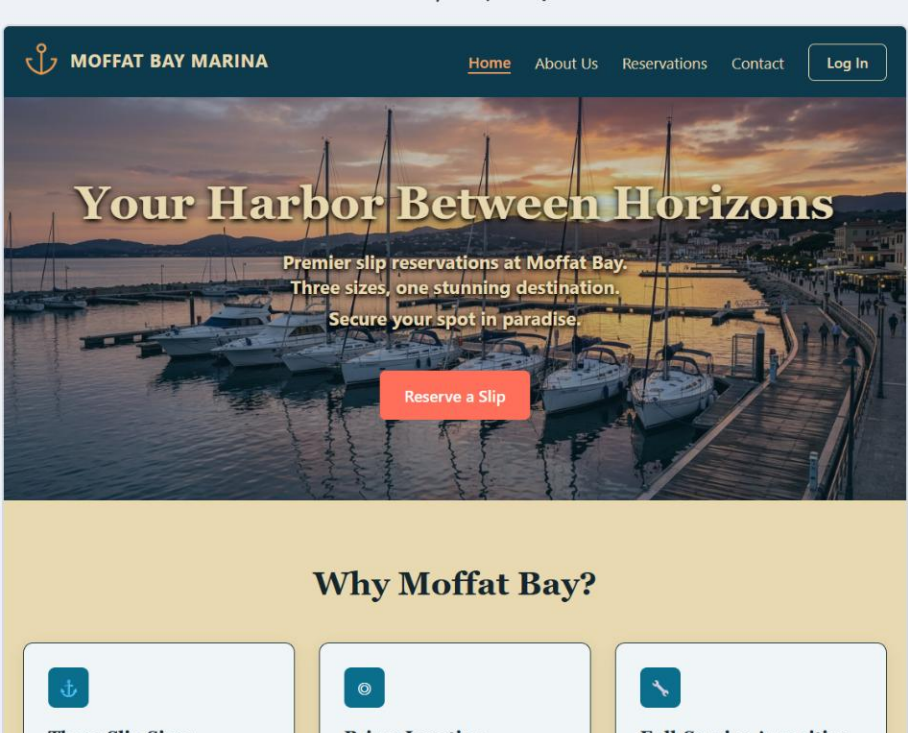

Step	Action	Expected Results	Dev Test	Peer Test
1	In a browser, navigate to http://localhost:8080/marinawebsite/index.jsp Or http://localhost:8081/marinawebsite/index.jsp	The Moffat Bay Marina landing page should load.	Pass	Pass

Developer (Sara)

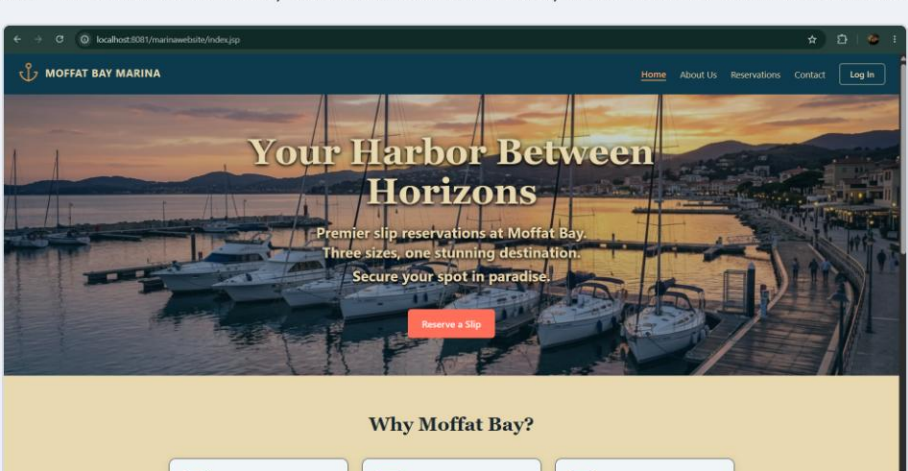

Step	Action	Expected Results	Dev Test	Peer Test
2	Expand the browser to full size and make sure zoom is set to 100%.	The landing page should show the header with navigation links at the top of the page. The hero section shows an image of the marina behind branding text. Below the text in the hero section is a button to reserve a slip. The main content below the hero section will have three content cards displayed horizontally. The footer contains information distributed evenly in three columns.	Pass	Pass

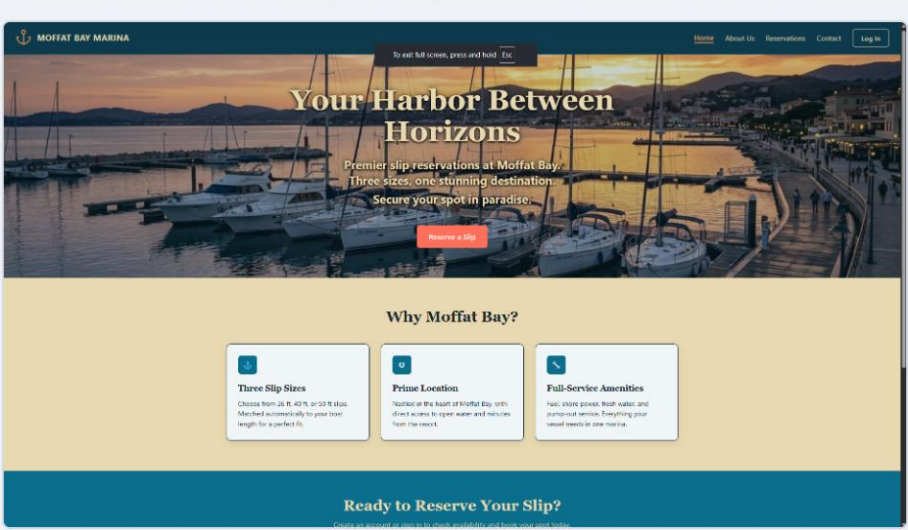

Developer (Sara)

Peer tester (Miguel) - Test 2, Step 2 - Browser at full size, zoom at 100%. Header, hero section and Reserve a Slip button all display as expected.

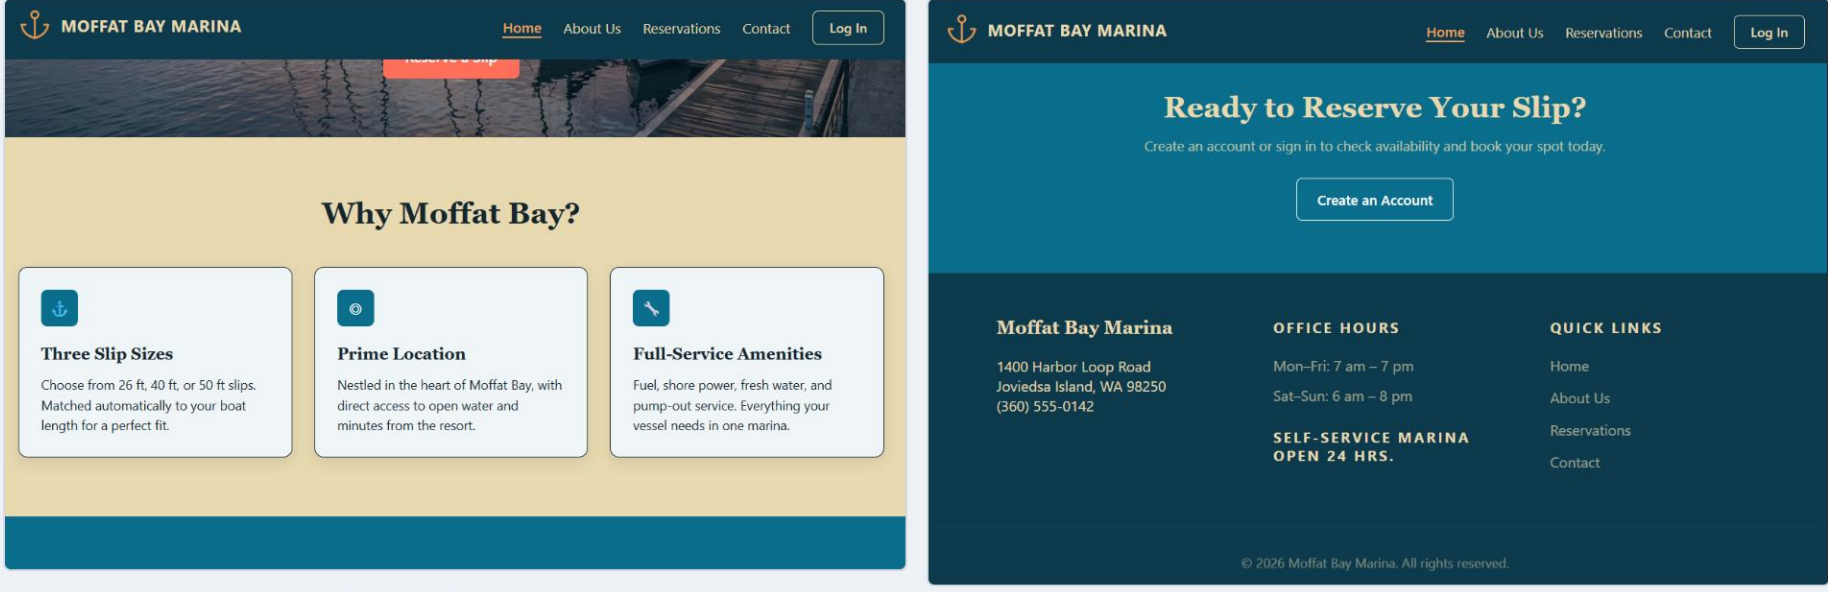

Peer tester (Miguel) - Test 2, Step 2 - Full screen, showing the three content cards laid out horizontally below the hero.

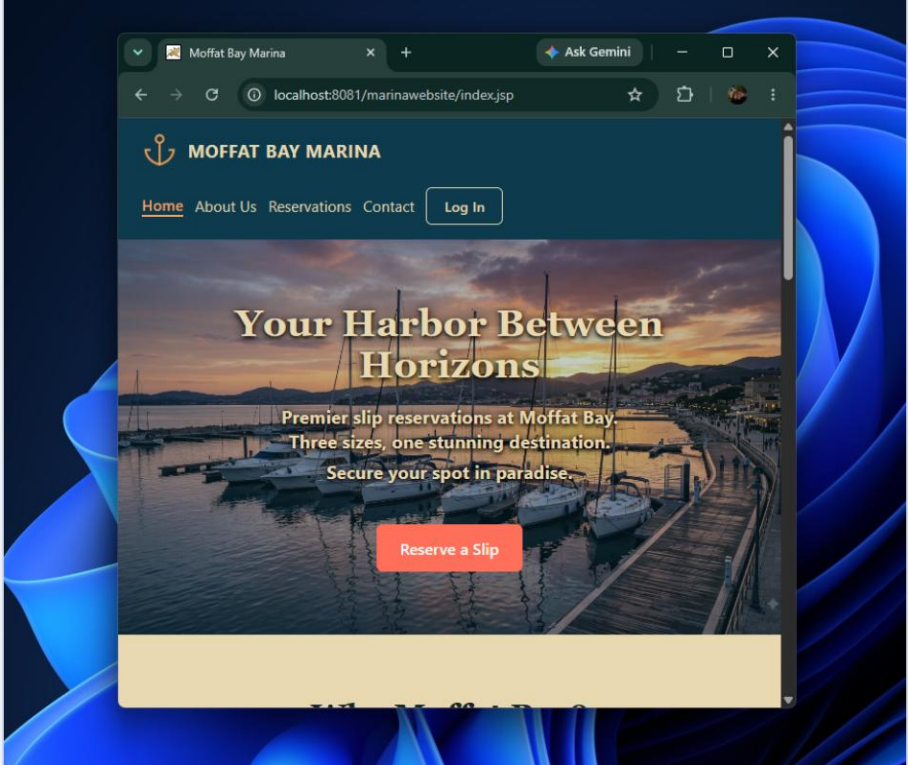

Step	Action	Expected Results	Dev Test	Peer Test
3	Resize the browser window to about 2/3 full size.	The contents of the page should display more compactly, but still be horizontal.	Pass	Pass

Developer (Sara)

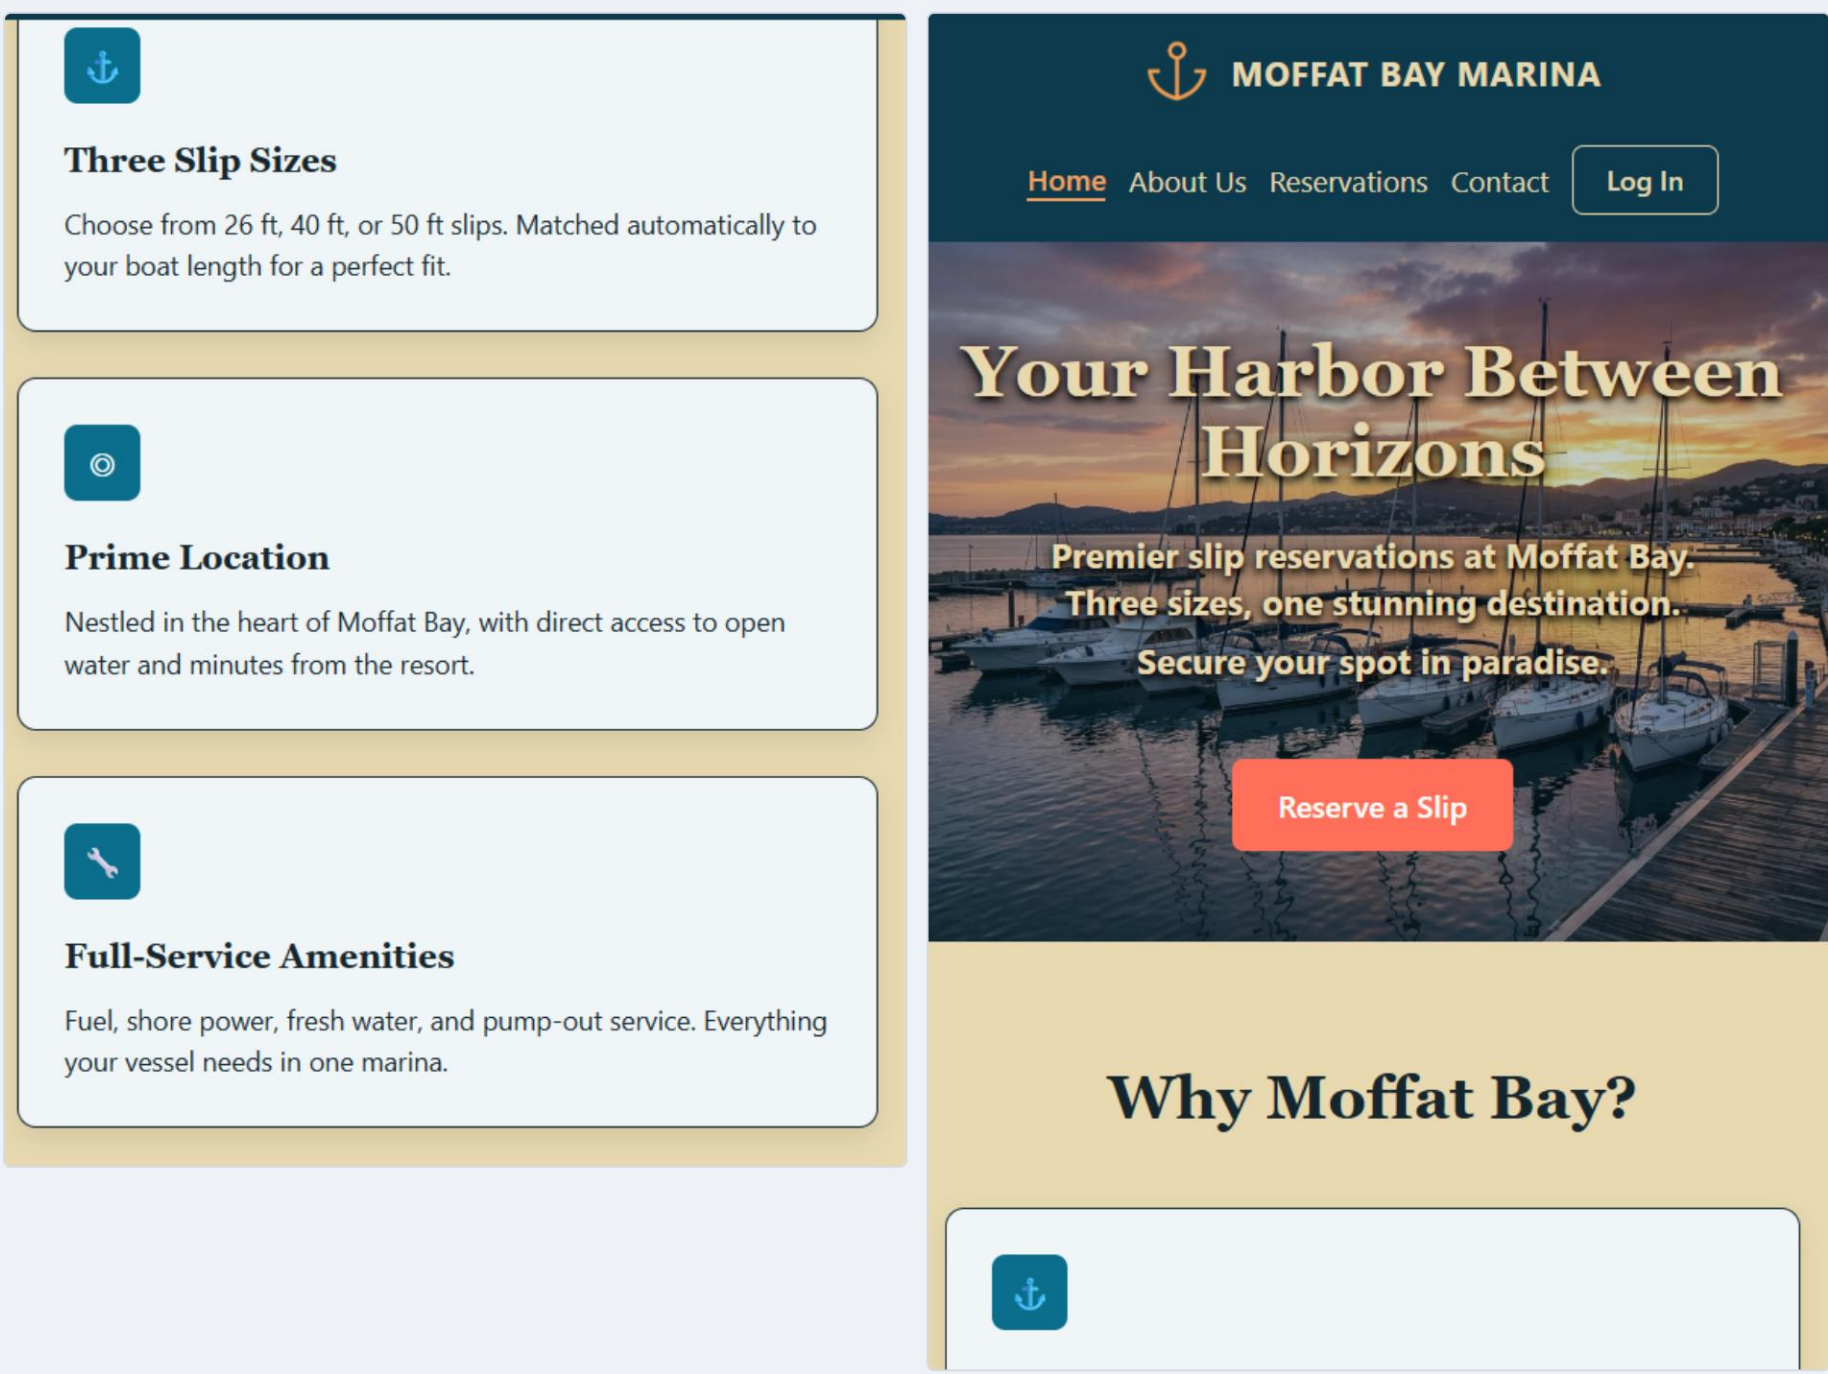

Peer tester (Miguel) - Test 2, Step 3 - Window resized to roughly two thirds width. Content is more compact but still horizontal.

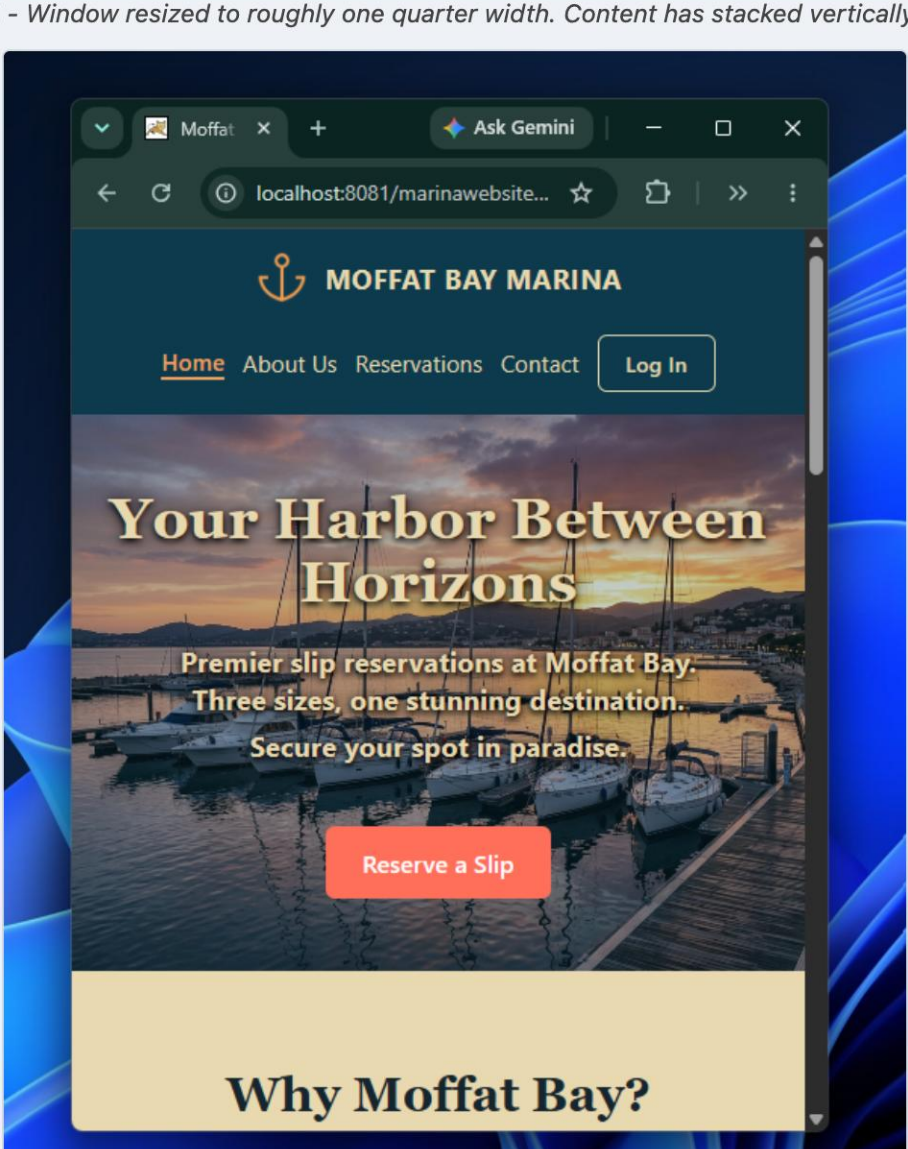

Step	Action	Expected Results	Dev Test	Peer Test
4	Resize the browser to about 1/4 of full size.	As the browser gets smaller, the contents should start to stack vertically. The header should still remain at top and the navigation elements should become more compact.	Pass	Pass

Developer (Sara)

Peer tester (Miguel) - Test 2, Step 4 - Window resized to roughly one quarter width. Content has stacked vertically and the navigation has compacted.

Comments

Developer (Sara)
Everything stacked nicely as the browser was resized. I didn't see any awkward spacing between any of the elements.

Peer Tester (Miguel)
Confirmed. The content stayed horizontal down to about two thirds width and stacked cleanly below that. The header compacted as expected and I did not see any text overflow, overlap or awkward gaps at any width I tried, including full screen.
